

Feeling the *heat* in your city?

Take action by participating in a community heat-mapping study!

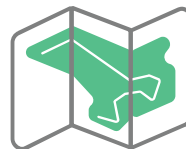

Be a “street scientist” and help discover which areas of your city are hotter and cooler during an extreme heat event.

- Why is mapping heat in your region important? You'll learn about how different neighborhoods vary in terms of heat across the region, and why.
- On a designated “Campaign Day”, you'll collect thousands of temperature and humidity measurements over 3 one-hour periods.
- Your contribution will reveal the distribution of heat across your region, helping your city to plan for the future and provide much needed relief.

You can be in a **HeatWatch** campaign as a:

Driver

Navigator

If you would like to participate, please respond to the Volunteer Interest Form!
